<sup>1</sup>The full name of the S&P 500<sup>®</sup> Distance Stabilizer Index is S&P 500<sup>®</sup> Distance Stabilizer TCA Index (USD) ER.

<sup>2</sup>The Index is an excess return index which reduces the performance of the S&P 500<sup>®</sup> Total Return Index by short-term interest rates. As a result, the index could generate negative returns in high-interest rate environments. In extreme prolonged volatile markets, the index could not have any exposure to the S&P 500<sup>®</sup> and could underperform, including in periods where markets are trending upwards.

<sup>3</sup>The return 12/4/96 – 12/31/96 was -0.11% cumulative.

The index is an excess return index. The returns of the index will reflect the performance of the underlying components in excess of a reference rate that could be earned on cash or a similar risk-free benchmark asset. Additionally, the performance of the index may include costs such as transaction and replication costs. These costs may vary over time with market conditions. The excess return nature of index and any costs will all reduce index performance and the potential interest credited within the annuity contract. Because the index applies a volatility control mechanism, the range of both the positive and negative performance of the index is limited.
